

AirModem.com: Microphone Setup for Windows

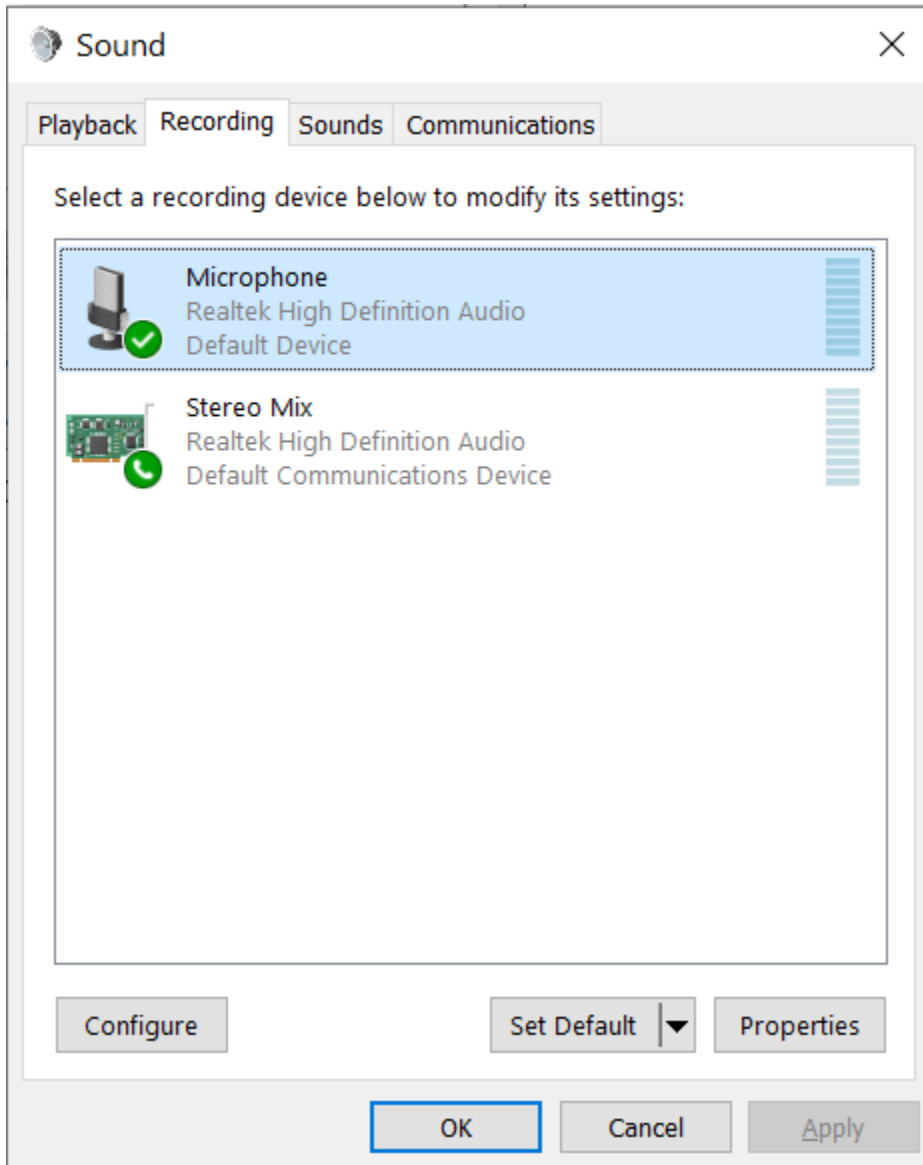

1. Open sound settings by pressing win+R and typing “control mmsys.cpl sounds” and pressing <enter>.

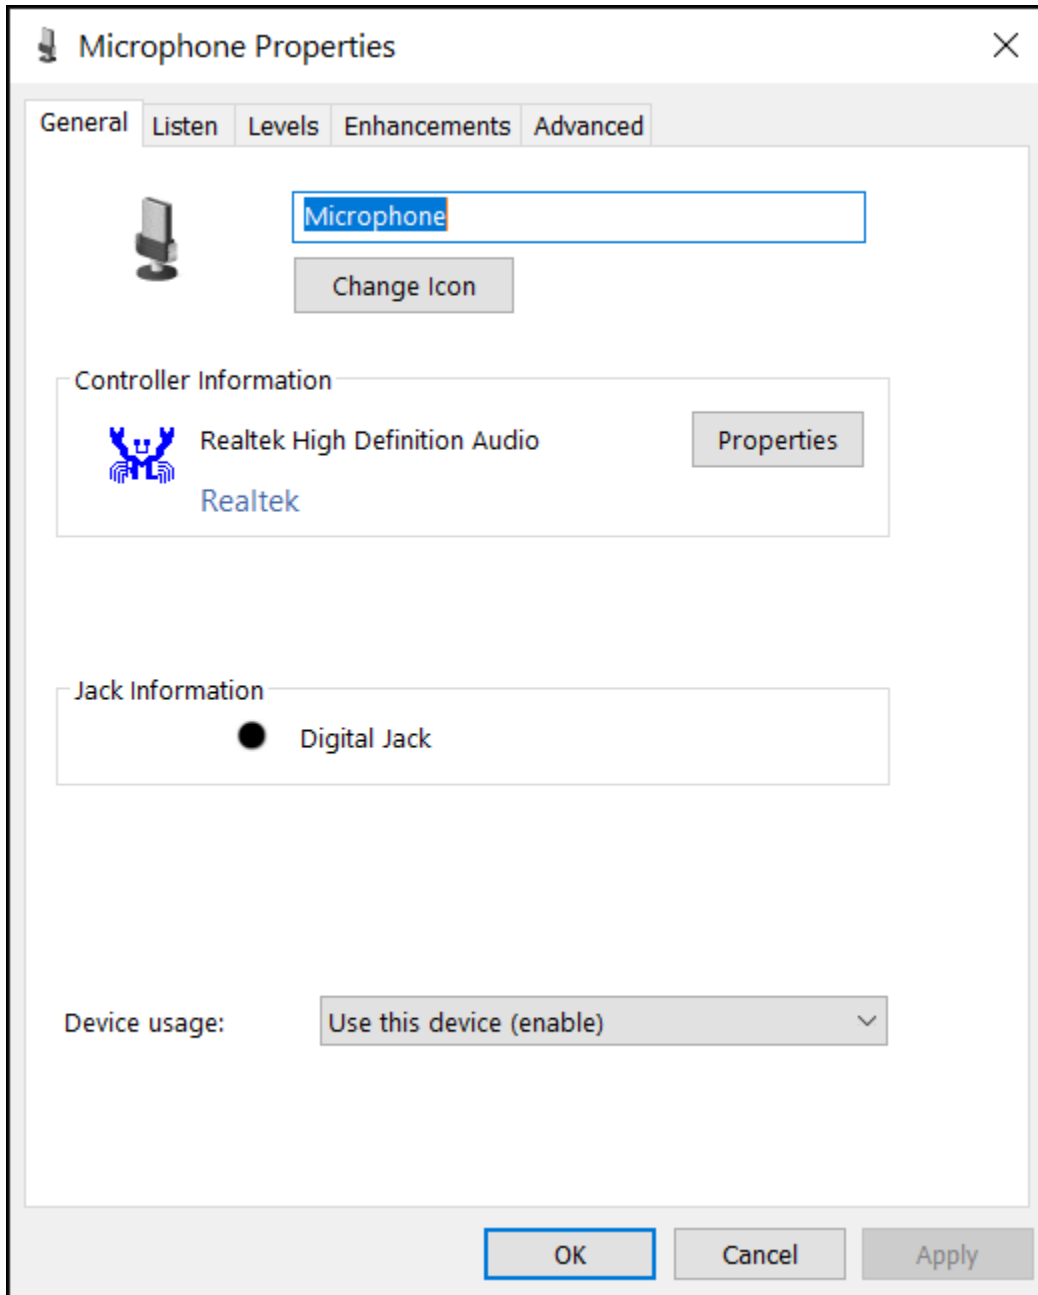

A window should come up which looks like this:

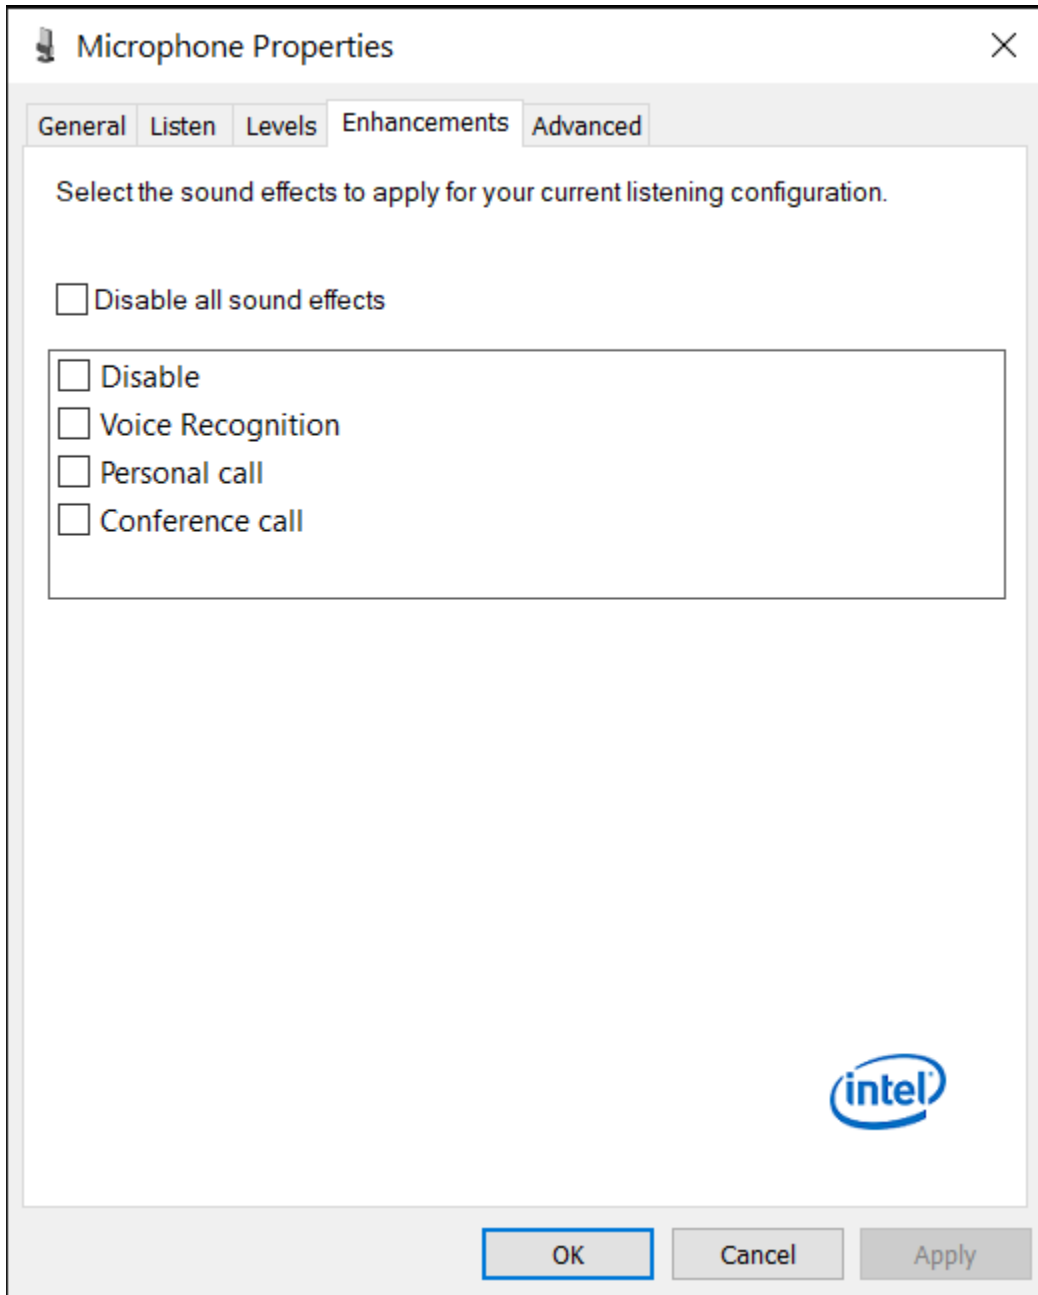

2. Navigate on this window to the “Recording” tab, and locate the device you will be using as a receiver.

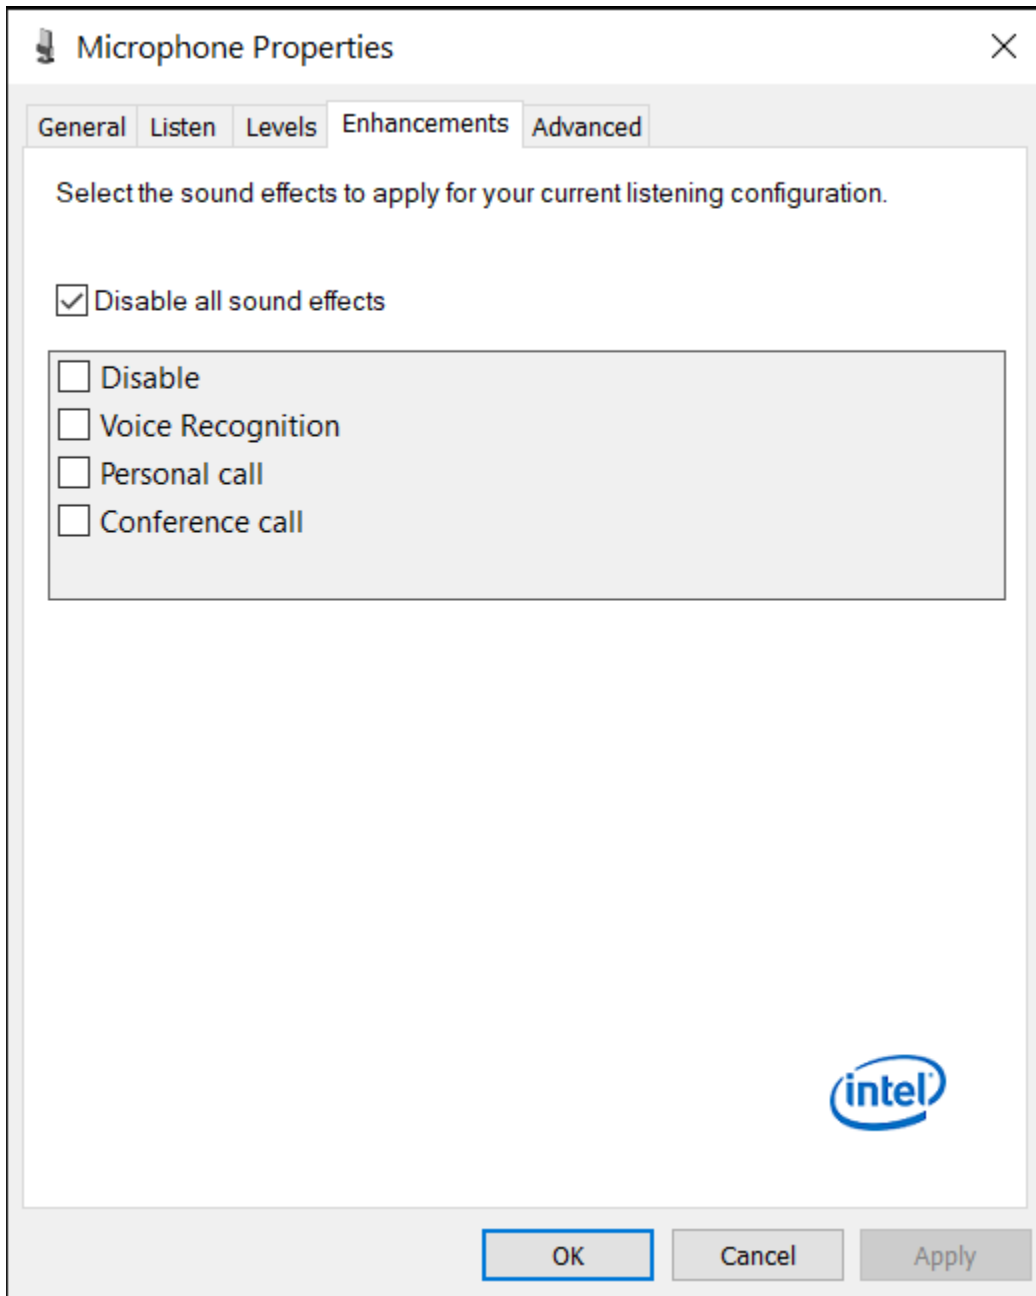

3. Click on "Properties." A Properties window should appear on screen.

4. In the properties window, navigate to the “Enhancements” tab.

5. Make sure that the “Disable all sound effects” box is checked, and/or uncheck all other checkboxes.

6. Click “OK” to apply your changes and close the window.
